The discontinued **Clifford 489X 2-Way LCD remote control** has been replaced by the genuine **Viper 7347V 4th Generation 2-Way LCD remote** for compatible Clifford Matrix security and remote-start systems. **$136.99 with FREE U.S. shipping.**

Description

Clifford 489X Replacement Remote Control - Viper 7347V

Looking for a replacement for your discontinued **Clifford 489X 2-Way LCD remote control**? The genuine **Viper 7347V 4th Generation 2-Way LCD remote** is the replacement solution for compatible Clifford Matrix security and remote-start systems.

Although the replacement carries the **Viper** name, Viper and Clifford are Directed brands. The 7347V uses the compatible Directed remote-control platform required by

systems that support the Clifford 489X.

$136.99 FREE Shipping in the USA

CLIFFORD 489X DISCONTINUED — REPLACEMENT AVAILABLE The product being sold and shipped is the **Genuine Viper 7347V 4th Generation 2-Way LCD Remote Control** . You will **NOT** receive the discontinued Clifford 489X.

489X REPLACEMENT Replacement for the discontinued Clifford remote

GENUINE VIPER 7347V Brand-new original Directed product

2-WAY LCD Visual and audible command confirmation

UP TO 1/4 MILE Rated operating range with compatible systems

Why Does a Viper 7347V Replace My Clifford 489X?

Clifford and Viper security and remote-start products are part of the Directed product family, and compatible systems shared remote-control technology across several Directed brands.

Because the original **Clifford 489X** has been discontinued, the newer **Viper 7347V** provides the replacement 2-way LCD remote for compatible Clifford systems.

You do not need a remote with the Clifford name printed on it for a compatible Clifford system to recognize the replacement.

The remote you receive is a **brand-new genuine Viper 7347V** from the original manufacturer — not an aftermarket reproduction, used remote or reprogrammed return.

Viper 7347V Replacement Remote Compatibility

In addition to replacing the **Clifford 489X**, the Viper 7347V can replace several earlier or discontinued 2-way LCD remote controls when used with a compatible system and receiver / Control Center:

VIPER 489V 7341V 7345V
PYTHON 489P 7341P
CLIFFORD 489X 489XD 7341X 7345X
AUTOMATE 7344A
AVITAL 7345L 7353L

IMPORTANT COMPATIBILITY INFORMATION:

If a **Clifford 489X previously operated your system**, then you already know the Viper 7347V is compatible with that system.

If you are purchasing the 7347V to replace a different remote model, compatibility is determined by the actual security / remote-start system and receiver / Control Center installed in the vehicle.

Remote-control compatibility is **not determined by the vehicle's year, make or model**. Verify your original remote model and installed system if you are unsure before ordering.

Programming Instructions

Viper 7345V Remote Control Programming Instructions

The **Viper 7345V** must be paired to the security or remote-start system installed in the vehicle before it can be used.

The correct programming procedure depends on whether your installed system is a **Security + Remote Start system** or a **Security Only system**.

IMPORTANT — LOCATE YOUR PROGRAMMING BUTTON FIRST

Depending on the age and configuration of your system, the programming button may be located in one of two places:

- **Separate Valet / Program Switch:** Older installations may have a separate small push-button switch hidden underneath the driver's side dashboard.
- **Control Center / Antenna:** Other systems use the programming button incorporated into the windshield-mounted Control Center / Antenna.

> Both buttons serve the same programming purpose in the routines below. Use whichever programming button is installed with your system.

1. **Door:** Open a vehicle door and leave it open.
2. **Key:** Turn the ignition key to the **ON** position. Do not start the vehicle.
3. **Choose:** Within five seconds, press and release the **Valet / Program button or Control Center / Antenna button one time**.
4. **Hold:** Within five seconds, press the same programming button one more time and **continue holding it**. The LED will flash one time and the siren will chirp to confirm entry into remote programming. **Do not release the button.**
5. **Transmit:** While continuing to hold the programming button, press the **LOCK button** on the Viper 7345V. The siren will chirp to confirm that the remote has been programmed.
6. **Release:** Release the programming button and turn the ignition key to **OFF**.

1. **Door:** Open a vehicle door and leave it open.
2. **Key:** Turn the ignition key to the **ON** position. Do not start the vehicle.
3. **Choose:** Within five seconds, press and release the **Valet / Program button or Control Center / Antenna button seven times**.

4. **Hold:** Press the same programming button one more time and **continue holding it**. The LED will flash seven times and the siren will chirp to confirm the selected programming channel. **Do not release the button.**
5. **Transmit:** While continuing to hold the programming button, press the **LOCK button** on the Viper 7345V. The unit will chirp to confirm that the remote has been paired to the receiver.
6. **Release:** Release the programming button and turn the ignition key to **OFF**.

> **NOTE:** If the system does not enter programming mode, first verify that you are using the correct programming button for your installation. Some vehicles have the **Valet / Program switch hidden underneath the dashboard**, while others use the button on the **windshield-mounted Control Center / Antenna**.

Programming Complete

After programming is complete, turn the ignition OFF and test the Viper 7345V by locking and unlocking the system. A properly paired 2-way remote should provide confirmation from the compatible system.
