Short Description

Valet Program Switch

Description

Brand NEW Directed Valet and Programming Momentary Push-button Switch

Looking for a replacement valet and programming switch for your Viper, Python, Hornet, Clifford, Wasp, Rattler, Avital or Sidewinder alarm or remote start system? Or do you just need a momentary push-button switch? Buy brand new from Access 1 Alarm and Audio!

These momentary push-buttons are used to program new remote controls, system features and placing the system in valet mode on all DEI or Directed products.

The momentary push-button switch will panel mount (flush fit) in a 9/32" hole. There is a 2 pin blue connector on the end for plugging into the blue port of the security, keyless or remote start control unit.

This momentary push-button switch can be used for various electronic circuits that require a push-button operation. The push-button has spring-loaded normally-open contacts and comes with 70" of 20 gauge wire.

Need a large quantity of these push-button switches? We can fill orders of 500+.
