

Hidden Starter Kill Switch & Anti-Theft Immobilizer – Installed

Brand: Directed

Product Code: A1-KILL-SWITCH

Stock: 4

MPN: A1-KILL-SWITCH

Location: Cleveland, OH

Price: \$169.99

Short Description

Protect your vehicle with a hidden starter kill switch or custom push-button immobilizer from Access 1 Alarm & Audio. Choose a manually operated concealed switch or, on compatible vehicles, a hidden authorization button that must be activated before every start. Certain factory controls may also be used. Starting at \$169.99 installed; advanced integrations may cost extra. Professional installation in Cleveland, Ohio.

Description

ADVANCED VEHICLE THEFT PROTECTION

Modern vehicles have sophisticated factory security systems, but thieves may exploit weaknesses in factory key authorization and vehicle electronics. At **Access 1 Alarm &**

Audio, our professionally installed **Hidden Starter Kill Switch & Anti-Theft Immobilizer** adds another layer of protection by preventing normal engine starting when the security feature is engaged.

Unlike an alarm that simply sounds a warning, this system provides a **separately controlled starter-disable feature**. Depending on your vehicle and installation preferences, the system can use a manually operated hidden switch or an authorization button that must be activated before each start.

Hidden Starter Disable

Helps prevent unauthorized engine starting until the required security control is operated.

Custom Activation Options

Choose a concealed switch, hidden push-button or compatible factory vehicle control.

Keep Your Factory Key

No additional alarm remote is required for the starter-disable function.

Choose How Your Starter Kill Switch Operates

We offer several installation options depending on the vehicle's electrical system and the level of convenience or security you prefer.

Option 1: Manually Operated Hidden Switch

A concealed switch allows you to activate the starter-disable feature when parking your vehicle. When you're ready to drive, return the switch to its authorized position and start normally. This is a straightforward way to add another layer of theft protection.

Option 2: Hidden Push-Button Authorization

For customers who want a more automatic security routine, certain installations can require a concealed button to be pressed **before every vehicle start**. After the vehicle is turned off, the system returns to its protected state, requiring authorization again before

the next start.

Option 3: Existing Factory Button Integration

On compatible vehicles, we may be able to incorporate an existing factory control into the authorization process. Depending on the vehicle, examples may include a **power window switch, high-beam control, fog light switch** or another suitable factory button.

This allows the vehicle to retain its original appearance without adding an obvious aftermarket switch. Factory-control integration is vehicle-specific and may require additional interface hardware or installation labor.

Why Add a Hidden Starter Immobilizer?

Factory key fobs and security systems are convenient, but an unauthorized person who defeats the factory security system may still be able to start the vehicle. A separately controlled starter-disable system adds another obstacle by requiring an authorization action beyond normal factory key operation.

It's a practical security upgrade for vehicle owners concerned about theft, unauthorized key programming and other methods of bypassing factory vehicle security. While no security system can guarantee theft prevention, a hidden starter kill switch can make unauthorized vehicle starting more difficult.

What's Included?

- Access 1 hidden starter-disable hardware
- Standard concealed switch installation
- Professional installation and secure wiring
- System operation and functionality testing
- Owner demonstration and operating instructions
- Optional custom authorization configurations available

STANDARD INSTALLATION - PARTS & LABOR INCLUDED

Vehicle Compatibility & Operation

Starter-disable integration varies by vehicle make, model, year and electrical system. Our technicians evaluate the vehicle before installation to determine the appropriate method and available control options.

Important: The exact activation and reset procedure depends on the selected configuration. A manually operated switch requires the owner to engage it when additional protection is desired. A supported automatic-reset authorization system requires the selected control to be activated before each start.

This security upgrade is designed to inhibit normal starting while the vehicle is parked. It is **not intended to shut off an engine that is already running**. The system does not include a siren, GPS tracking or smartphone notifications.

Want More Complete Vehicle Security?

A hidden starter kill switch helps prevent unauthorized starting. For additional protection, ask about a complete aftermarket alarm system with independent remote controls, intrusion detection and an audible alarm. Combining different security methods can provide additional layers of protection beyond factory equipment.

Professional Installation & Warranty

Access 1 Alarm & Audio provides professional, vehicle-specific installation backed by our lifetime labor warranty for the original vehicle owner, subject to warranty terms. Applicable hardware warranty coverage is provided at the time of installation.
