

KTX-NS01

USB Plug-In GPS Navigation Module with Offroad Mode

PRODUCT OVERVIEW

Get access to the latest maps without relying on a smartphone or Wi-Fi connection with the KTX-NS01 USB Navigation Module.

PRODUCT FEATURES

Navigation Anywhere – The KTX-NS01 is a compact module that plugs into the USB port of compatible Alpine radios via an included 10cm cable and utilizes the Alpine radio antenna and a GPS Satellite connection to provide onboard navigation no matter where your next adventure takes you.

Off-road Mode - Go off the beaten path with Off-Road Mode on the KTX-NS01. Off-Road Mode provides tracking of trail distance, time, and compass readings. The off-road navigation database includes Points of Interest (POIs) for vehicular recreational areas, FunTreks trailheads, and U.S. campsites. You can also revisit trails through Off-Road Mode trip recording.

Navigation Features – After plugging the KTX-NS01 into the Alpine radio, a navigation app will appear on the home screen, providing instant access to the HERE map database with maps of the United States and Canada. Voice prompts for turn-by-turn directions are also available and are projected from the vehicle's sound system.

Driving Enhancements – The KTX-NS01 offers a suite of built-in driving features like signs, signals, warnings, traffic patterns, speed limits, and extended lanes. Streets are colored on the navigation map based on the current traffic flow. The module enables a pinch-to-zoom feature on the radio screen that allows you to zoom in on the map during the navigation session.

KTX-NS01

USB Plug-In GPS Navigation Module with Offroad Mode

WHAT'S IN THE BOX

- (x1) KTX-NS01
- (x1) 10 cm USB Adaptor Cable
- Registration Card
- QR Code for Owner's Manual
- Warranty Information

COMPATIBILITY

- iLX-507
- iLX-F509
- iLX-F511
- i509-WRA-JK
- i509-WRA-JL

OVERVIEW FEATURES

- Dimensions: 3.25" x 1" x 1"
- On-Road Navigation with HERE map data of the United States and Canada, including Alaska, and Hawaii with advanced POI functions.
- Off-Road Navigation with FunTreks trailhead POI database
- iGo Primo Nextgen navigation software (Cannot be used in conjunction with Apple CarPlay or Android Auto)
- Utilizes the Alpine radio antenna and GPS Satellite connection
- Status LED Loop to signal on/off status and updates
- Voice prompts for turn-by-turn directions
- Pinch-to-zoom map interface
- Built-in Wi-Fi module
- Signs, Signals & Warnings
- Smart Routes using historic traffic patterns
- Advanced Route Planning
- Speed Limits
- Map Display Modes: 2D Heading Up, 2D North Up, 3D
- Text-to-Speech
